

Custom dice specification: a set of 11 dice

What the dice are for

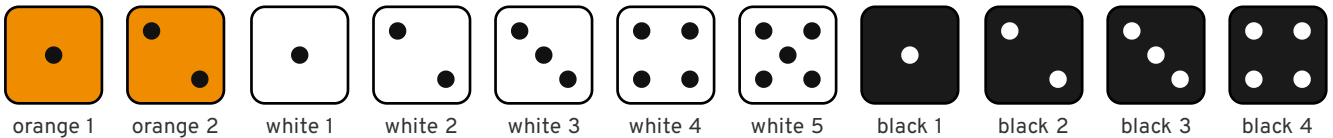

Slow Money is a family game about money and chance, played by every generation around a table. It uses a set of eleven dice, each of which works as a coin: a die that lands with **dots on top counts as 1**, and a die that lands **blank on top counts as 0**.

One throw of all eleven dice produces an 11-digit binary number, which selects one word from a printed list of 2,048 words. The list is printed on four sheets of 32 rows and 16 columns: 2 dice choose the sheet, 5 dice choose the row and 4 dice choose the column. The **colour** of a die shows which group it belongs to, and the **number of dots** shows its position within the group.

Why balance matters. The game only works if every die is a fair 50/50 coin, with dots and blanks landing equally often. For this reason the dots must be **UV printed flush with the surface, not drilled or engraved**, so that every face weighs the same.

Contents of one set (11 dice)

Colour	Quantity	Dots on the marked faces	Dot colour
Orange	2	one die with 1 dot, one die with 2 dots	black
White	5	one die each with 1, 2, 3, 4 and 5 dots	black
Black	4	one die each with 1, 2, 3 and 4 dots	white

Requirements for every die

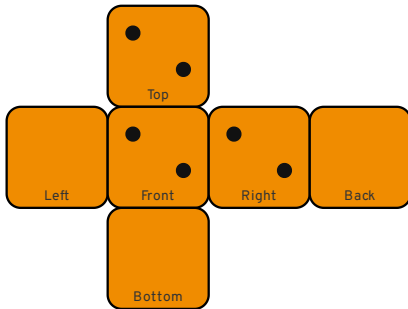

- **Six-sided**, standard size (16 mm preferred; please advise your options), rounded corners, opaque material.
- **Three marked faces and three blank faces.** All three marked faces of a die show the same number of dots, in the standard pip pattern.
- **Each marked face is opposite a blank face.** The three marked faces therefore meet at one corner of the die (see the layout diagram on page 2).
- **Dots UV printed**, flush with the surface. No drilling, engraving or recesses of any kind.
- **No other markings** on any face: no numbers, logos or text.
- **Consistent material and weight** across all eleven dice and all colours, with no internal voids or bubbles.

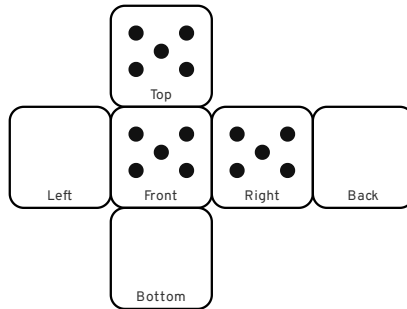

Face layout and quotation

Face layout

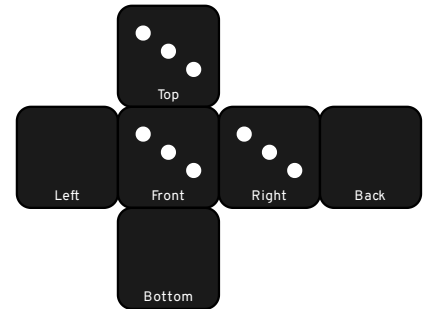

Each die is shown unfolded. **Top, Front and Right** carry the dots; **Bottom, Back and Left** are blank. Every marked face is opposite a blank face. The same layout applies to all eleven dice; only the colour and the number of dots change.

Example: orange die, 2 dots

Example: white die, 5 dots

Example: black die, 3 dots

Please quote for

Item	Quantity
Sample sets (11 dice each), for checking before production	3 sets
Production sets (11 dice each)	100, 250 and 500 sets
Optional: each set of 11 dice packed together in a small bag	per set

Questions

- Minimum order quantity, and price per set at each quantity.
- Cost and lead time for the sample sets.
- Production lead time.
- Available sizes, and the exact orange you can supply (a photo or colour reference would help).
- Durability of the UV printed dots with frequent handling.
- Shipping cost to Italy and to the United Kingdom.
